Speed-difference sweep, 1-layer body (16 tanh units), truncated loss, lr 1e-3 / 1e-4: participation ratios before capture
(each head's time after its capture removed; median [IQR] over 100 runs per Δv, iteration 14000)
(a) the draft's statistics: strategy PR(Z) (circles), centred latent PR(H) (squares)
(b) gauge-invariant: strategy Gram PR (circles), uncentred latent PR(H) (squares)
