Speed-difference sweep on baseline_D4 (4-layer body, truncated loss): median [IQR] over 100 runs per Δv, iteration 14000
(a) the draft's statistics: strategy PR(Z) (circles), centred latent PR(H) (squares)
(b) gauge-invariant: strategy Gram PR (circles), uncentred latent PR(H) (squares)
ρ = R/(L/2), R = Δv t_max + ε
break ρ = 1 (Δv = 0.230)
saturation ρ = √2 (Δv = 0.334)
constant-heading bound 2
participation ratio
Δv = v_P − v_E
