Speed-difference sweep, 4-layer body (16 tanh units each), truncated loss, lr 1e-3 / 1e-4: participation ratios before capture
(each head's time after its capture removed; median [IQR] over 100 runs per Δv, iteration 14000)
(a) the draft's statistics: strategy PR(Z) (circles), centred latent PR(H) (squares)
(b) gauge-invariant: strategy Gram PR (circles), uncentred latent PR(H) (squares)
ρ = R/(L/2), R = Δv t_max + ε
participation ratio
break ρ = 1 (Δv = 0.230)
saturation ρ = √2 (Δv = 0.334)
constant-heading bound 2
Δv = v_P − v_E
