(a) Baseline: drop k=12→16 is ×31 (E), ×6 (P)
latent power (normalised to the k ≤ 8 plateau)
integer frequency k
evader (break at k=17)
pursuer (break at k=38)
input bandwidth K = 12
intermediate band k ∈ [11, 50]
(b) Bandwidth sweep (C3): the break follows K
evader latent power (normalised)
integer frequency k
K = 6: break at k = 11, 99% of power at k ≤ K
K = 12: break at k = 17, 99% of power at k ≤ K
K = 24: break at k = 46, 98% of power at k ≤ K
